

The patented and clickable KBSTi cable tray system is designed to be stronger, optimally stackable and transportable, quick to install, with random overlap and exceedingly safe.

- Standard design: pre-galvanised steel
- Material option: Hot-dip galvanisation, polyester powder coating
- Length: 3 metres
- Height: 60 mm
- Thicknesses: 0.6 mm, 0.75 mm, 1 mm and 1.25* mm (* On demand)
- Widths: 150, 200, 250, 300, 400

QUICK & CLICK

KBSTi can be delivered with a complete range of suitable accessories:

Optimum stockkeeping
Quick & Click
Safe

Pioneering installation benefits... thanks to a sophisticated design.

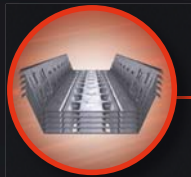

Vergokan can offer you a completely innovative concept, far-removed from the traditional form of every current cable tray system. Due to its unique shape, the KBSTi represents an ingenious and innovative cable tray system.

The design of the KBSTi cable tray is amazingly simple and simultaneously offers a number of advantages. The changeover from the classic U-shape to a taper-shape makes the KBSTi cable tray not only stronger and more robust, it also assures substantial space savings in transport and storage.

The Quick & Click system and the random overlap, too, are unique features of the KBSTi cable tray, which make substantial savings possible on installation time. Trays can be quickly linked to one another and do not require any tools or accessories.

Last but not least, the KBSTi provides all other well-known Vergokan qualities. Safety, sustainability and reliability are given absolute priority.

With the KBSTi product range, Vergokan is launching a new cable tray system on the market. Its shape, stackability and clickable installation are unique characteristics. The revolutionary, patented KBSTi cable tray system is stronger, can be stored and transported in an optimal manner, is quick and easy to install, comes with a random overlap and requires no tools. It provides substantial savings for your business!

OPTIMALLY STACKABLE

Thanks to its unique shape, KBSTi cable trays are optimally stackable. That means savings of 70 to 80% in storage space and transport costs.

QUICK & CLICK

SNAP-IN

KBSTi takes an additional step in the Quick & Click principle. KBSTi cable trays hook into each other, automatically clicking in place without additional clips.

RANDOM OVERLAP

This makes time-consuming sawing unnecessary. It ensures optimal flexibility and a gain in time during the installation.

PATENTED

The patented system and technology is unique on the market for cable support systems.

SAFE

Rounded corners, a round bottom and rounded edges guarantee a safe assembly. This makes damage to cables impossible.

HIGHER LOAD

The cable tray has become stronger, due to its specific form, giving the possibility to increase the load. If you don't have to increase the load, the KBSTi requires fewer brackets in comparison to a classic cable tray of the same thickness. Or you can select a thinner KBSTi for the same load. In all cases a more cost effective solution.
