| Test according to: | § 11.1.2 of the IEC 61537 |
| Description of testmethode: | A current of $25 \mathrm{~A} \pm 1 \mathrm{~A}$ A.C. having a frequency of 50 Hz to 60 Hz supplied by a source with a no-load voltage not exceeding 12 V shall be passed through the length of the samples. The voltage drop shall be measured between two points 50 mm each side of the coupler or integral coupling and again between two points 500 mm apart on one side of the joint. The impedances shall not exceed 50 $\mathrm{m} \Omega$ across the joint and $5 \mathrm{~m} \Omega$ per meter without the joint. |

## CONCLUSION:

All the devices under test where tested as described above and did meet their criteria to pass the test.

We can state that the cable tray ZMKBSCL60.---. 075 is conform to § 11.1.2 of the IEC 61537.

In addition: as we see no negative influence of the ZM coating compared to SZ
(Sendzimir) coating, we can also state that the report KBSCL60.---.-- and KBSCL60.---. 060 can be used for the ZM coated versions.
