

For KLM100X, KLM125X, KLZX and KLWX in widths 900 & 1000 the cross section is not delivered fully assembled because of size during transport.

Therefore the cross ladder and the sides are delivered separately. These should be connected with bolts and nuts (24 X VM6.10) or rivets (24 X 5,8*9) on site.

Products are delivered with bolts and nuts included.

3 X VM6 or 3 X RIVET 5.8*6.0
(In total 8 times to assemble cross)
